Subject: Paint Booth Water to Storm Water System

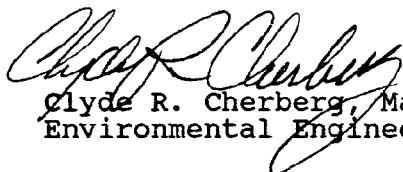

Dear Mr. Peck:

On October 5, 1988 at 4:45 pm during the transfer of paint booth water, a hose connection broke allowing paint booth water to flow to a storm drain. An estimated amount of twenty to twenty-five gallons reached the catch basin. This liquid was pumped out of the drain with the same vacuum tanker truck. The water contained a low level of paint residue - lab analysis is reported on the spill report. This incident was reported to Karen Renmaker, of your office, on October 6, 1988.

Please find enclosed the spill report with the two corrective actions taken.

If you have further questions, please contact Tom Grime at 234-4485.

Sincerely,

  
Clyde R. Cherberg, Manager  
Environmental Engineering
